

## Centrifugal electric motor water pump

Centrifugal electric motor water pump is the integrated design of the national energy conservation of pump, it is type BA, type B and other more new single-stage centrifugal pump water. Single-stage single-suction centrifugal pump advantages are: the complete series hydraulic performance layout is reasonable, the user to select a wide range, convenient maintenance; Efficiency and suction average reached the international advanced level. This type of pump is applicable to industrial and urban water supply, water drainage, can also be used for agricultural irrigation and drainage, and the chemical and physical properties for conveying water or other liquid with similar clean water, low temperature 90 °C.
